## Amendments to the Specification:

Please amend the specification as follows:

Please replace the paragraph starting at page 1, line 22, with the following rewritten paragraph:

For example, rare earth magnets having such a structure has been proposed that contain rare earth magnet particles bound with SiO<sub>2</sub> and/or Al<sub>2</sub>O<sub>3</sub> particles, as disclosed in <u>Japanese Patent Provisional Publication No. 10-321427</u>. The electric resistance of the rare earth magnet can be increased with SiO<sub>2</sub> or Al<sub>2</sub>O<sub>3</sub> intervening among the rare earth magnet. However, the magnet characteristics, such as the coercive force and the residual magnetization, are significantly lowered by adding SiO<sub>2</sub> or Al<sub>2</sub>O<sub>3</sub>. It is accordingly difficult to be applied to motors of moderate to high power output.
